Regarding claim 1, a ground synthesizer circuit coupled to the high and low bus signals, configured to synthesize a ground from the high and low bus signals; and an edge triggered, coupled to the capacitive isolator, configured to regenerate the data stream into a first reconstructed data stream by comparing the isolated bus high signal with the ground.

Regarding claims 2-13, as being dependent on claim 1.

Regarding claim 14, comparing the data stream of edge pulses to a ground signal; and latching the output data stream high upon a positive edge pulse and latching the output data stream low upon a negative pulse to create the output data stream.
